Supporting Information

This document contains: (1) a figure showing the linear rail set up using DART-HRMS and Dip-it Tips; (2) raw data showing the peak areas and peak area ratios for yangonin (analyte) and yangonin-*d*₃ (IS) used to create the calibration curves; and (3) mass measurements and relative intensities of kavalactones and flavokavains in Kava products.

Figure S1. Linear rail system and holder used to position the Dip-it tips with samples between the ion source and the mass spectrometer inlet to introduce samples into the gas stream in order to automate the analysis of calibrators and Kava sample extractions.
